ABSTRACT OF THE DISCLOSURE

A mobile terminal and method for displaying a web site using previous display information. In the mobile terminal, a memory stores previous display information of a web page previously visited by a user. A controller performs a control operation so that

5   the loaded web page is displayed on a display unit after the controller detects the previous display information of a loaded web page from the memory. In the method, a web page is loaded if the user accessing a wireless Internet requests the mobile terminal to visit the web page. The previous display information of the loaded web page is detected from an internal memory of the mobile terminal and the loaded web page is

10   displayed utilizing the display information. As a result, the mobile terminal and method enable users to easily use the wireless Internet.
